to 20/20 vision? Quick Answer It is impossible to convert 20/20 vision directly into diopters because they are two different
measures of sight.

acuity to determine how strong of a correction may be needed.. For instance, a -1 00 diopter correction usually belongs to a
person with 20/40 vision.. However, there is a correlation between the measure of visual acuity (20/20) and the focusing power
of corrective lenses (diopters). Html Slideshow Maker Free Download

00 Visual acuity does not directly convert into diopters Lower corrections are usually consistent from one patient to another.. Ask your optometrist for the number that corresponds to the strength of focus on your lenses.. Corrections higher than six diopters, either negative or positive, may have exponentially lower acuity than lower corrections.. 00 Corrections for far-sighted people are shown in positive diopters, such as +3. 773a7aa168 [Download Final Cut Pro 7 Free For Mac](#)
